# Chemiluminescence NO, NO<sub>2</sub> & NOx analyzer **AC32e**

## PRINCIPLE OF OPERATION:

The **AC32e** is a criteria pollution monitor based on the chemiluminescence, the standard method for the measurement of the concentration of nitrogen dioxide and nitrogen monoxide in ambient air (EN 14211).

The chemiluminescence method for gas analysis of oxides of nitrogen relies on the measurement of light produced by the gas-phase titration of nitric oxide and ozone. This light is measured using a photomultiplier tube (PM). To measure total oxides of nitrogen (NOx), the sample passes over a heated catalyst to reduce all oxides of nitrogen to NO. The instrument performs the automatic switching of the catalyst in and out of the sample path so that the resulting signals are compared to indirectly measure NO<sub>2</sub>.
